Key Findings

- Most products maintain positive price premiums versus market benchmarks.
- Char Kway Teow (67.2%), Tandoori chicken(62.57%) and Beef Rendang (60.1%) command the highest average price premiums.
- Several high-revenue products continue to perform strongly despite premium pricing, indicating strong customer willingness to pay.
- The portfolio demonstrates pricing power, suggesting that value perception is a stronger driver of demand than price competition.

Business Implication

The portfolio successfully maintains premium pricing while sustaining demand. Future pricing strategies should focus on preserving value perception and optimizing prices for high-volume products to further improve profitability.
