Key Findings

- Non-promotional sales generate 80.7% of total revenue and 82.6% of total profit.
- Promotional sales contribute 19.3% of revenue and 17.4% of profit.
- The portfolio maintains strong performance without relying heavily on discounts.
- Average revenue and units sold are higher during promotional periods, indicating that promotions successfully stimulate demand.

Business Implication

Promotions drive incremental sales volume but contribute a smaller share of overall profitability. Future promotional activities should focus on strategic products and high-margin SKUs to maximize return on investment rather than relying on broad discounting.
