Summary Table

Metric	Month
Highest Revenue	January
Peak Season	August, December
Lowest Revenue	September

Key Findings

- Revenue remains relatively stable throughout the year, ranging between approximately €2.4M and €3.0M per month.
- The strongest revenue periods occur in January, August, and December, indicating seasonal demand peaks.
- Revenue gradually declines during the middle of the year and reaches its lowest level in September before recovering in the final quarter.
- Demand increases significantly toward year-end, suggesting stronger consumer spending during holiday and festive periods.

Business Implication

The portfolio demonstrates clear seasonal demand patterns. Inventory planning, promotional activities, and assortment launches should be aligned with peak-demand periods to maximize revenue opportunities while maintaining product availability.
