

A: Weather Impact

weather_condition	Revenue	Units	Revenue Share %
Cloudy	9934319.32	856989	30.37%
Rainy	6397461.54	527936	19.56%
Sunny	16382006.36	1475091	50.08%
Grand Total	32713787.22	2860016	100.00%

Weather Impact

- Sunny weather generates approximately 50% of total revenue and drives the highest sales volume.
- Cloudy conditions contribute around 30% of revenue.
- Rainy days show the lowest demand, accounting for only 20% of revenue.
- Customer demand appears strongly influenced by weather conditions.

B: Special Event Analysis

special_event	Revenue	Profit	Revenue Share %
FALSE	30513910.45	23211322.45	93.28%
TRUE	2199876.77	1673645.57	6.72%
Grand Total	32713787.22	24884968.02	100.00%

Special Event Impact

- Special events contribute approximately 6.7% of annual revenue.
- The majority of sales occur during regular trading periods.
- Event-driven demand provides incremental revenue opportunities but does not dominate portfolio performance.
- Special events can be leveraged strategically through targeted promotions and seasonal assortment planning.

Key Consumer Insights

- Weather has a stronger impact on purchasing behavior than special events.
- Sunny conditions drive the highest customer demand and sales volume.
- Special events generate additional revenue but represent a relatively small share of overall business performance.
- Demand patterns suggest opportunities to align promotions, inventory planning, and assortment strategies with external consumer drivers.
